What is Artificial Intelligence (AI)?

Artificial intelligence

Artificial intelligence is intelligence exhibited by machines. In computer science, an ideal "intelligent" machine is a flexible rational agent that

perceives its environment and takes actions that maximize its chance of

“Colloquially, the term "artificial intelligence" is applied when a machine mimics "cognitive" functions that humans associate with other human minds, such as "learning" and "problem solving". As machines become increasingly capable, facilities once thought of as uniquely human, such as "learning" and "problem solving", are no longer perceived as an exemplar of "artificial intelligence" having become a routine technology. Capabilities currently classified as AI include successfully understanding human speech, competing at a high level in strategic game systems, self-driving cars, and interpreting complex data.

Cognitive Services

Give your solutions
a human side

Microsoft Cognitive Services

Vision

From faces to feelings, allow your apps to understand images and video

Speech

Hear and speak to your users by filtering noise, identifying speakers, and understanding intent

Language

Process text and learn how to recognize what users want

Knowledge

Tap into rich knowledge amassed from the web, academia, or your own data

Search

Access billions of web pages, images, videos, and news with the power of Bing APIs

Analyze image

Type of image

Clip Art Type	0 Non-clipart
Line Drawing Type	0 Non-Line Drawing
Black & White Image	False

Content of image

Categories	[{ "name": "people_swimming", "score": 0.099609375 }]
Adult Content	False
Adult Score	0.18533889949321747
Faces	[{ "age": 27, "gender": "Male", "faceRectangle": { "left": 472, "top": 258, "width": 199, "height": 199 } }]

Image colors

Dominant Color Background	White
Dominant Color Foreground	Grey

            "surprise": 0.9952837}
```

Face detection and tracking

High precision face location detection and tracking

Can detect up to 64 human faces in a video (no smaller than 24x24 pixels)

Detected and tracked faces are returned with coordinates and a Face ID to track throughout the video

Time (sec)	Face ID	x, y	Width, height
0	0	0.59, 0.23	0.09, 0.16
0	1	0.38, 0.15	0.07, 0.12
1	0	0.54, 0.25	0.09, 0.15
1	1	0.23, 0.18	0.07, 0.12

Motion detection

Indicates when motion occurs against a fixed background (e.g., surveillance video)

Trained to reduce false alarms, such as lighting and shadow changes

Start time	End time	In region
1.9	3.6	0
5.2	15.1	0

Content Moderator

Protect your brand and users with automated image, text, and video moderation services and human review tools

Image moderation

Automatically evaluate images for offensive and unwanted content across differing file types—including altered images.

Text Moderation

Detect profanity in more than 100 languages and match text against your custom lists automatically.

Video Moderation (in Azure Media Services)

Enable the proactive detection of adult content in videos with moderation handled in the cloud by Azure Media Services.

Bing Speech API

Voice recognition (speech to text)
Converts spoken audio to text

Voice output (text to speech)
Synthesize audio from text

Speech intent recognition
Convert spoken audio to intent

Language Understanding

Understand what your users are saying

Use pre-built Bing and Cortana models or create your own

Linguistic analysis

Analysis tools for natural language processing
Access to part-of-speech tagging and parsing,
identifying concepts, and actions

Text analytics

Sentiment analysis

Understand if a record has positive or negative sentiment

Key phrase extraction

Extract key phrases from a piece of text, and retrieve topics

Topic detection

Use clustering techniques to identify the trending topics on a large set of text records

Language detection

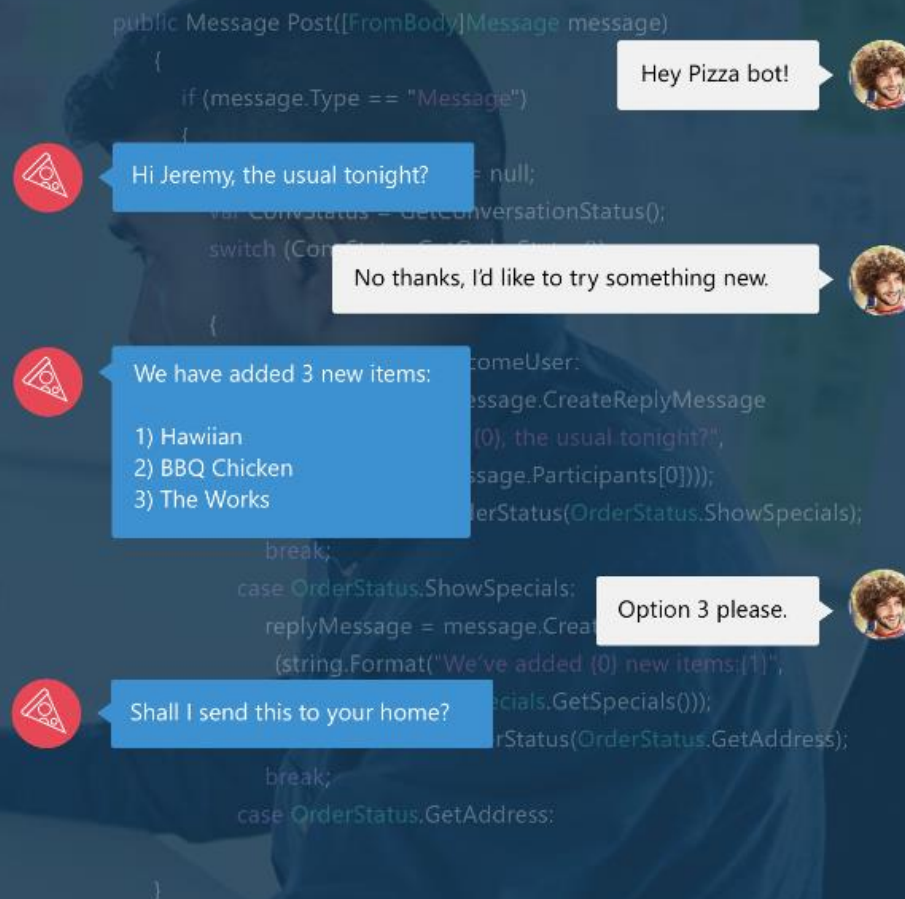

Identify the language, 120 supported languages

Microsoft Bot Framework

Your bots — wherever your users are talking.

Build and connect intelligent bots to interact with your users naturally wherever they are, from text/sms to Skype, Slack, Office 365 mail and other popular services.

Get started

```
public Message Post([FromBody]Message message)
{
    if (message.Type == "Message")
    {
        var ConvStatus = GetConversationStatus();
        switch (ConvStatus)
        {
            case OrderStatus.ShowSpecials:
                break;
            case OrderStatus.ShowSpecials:
                replyMessage = message.CreateReplyMessage(
                    (0), the usual tonight?",
                    message.Participants[0]));
                ConvStatus(OrderStatus.ShowSpecials);
                break;
            case OrderStatus.GetAddress:
                break;
        }
    }
}
```

Hey Pizza bot!

Hi Jeremy, the usual tonight?

No thanks, I'd like to try something new.

We have added 3 new items:

- 1) Hawaiian
- 2) BBQ Chicken
- 3) The Works

Option 3 please.

Shall I send this to your home?
